## APPEARANCE OF MOBILE PHONE(S) / SMART DEVICE(S) SUBJECT TO CONSIDERED AS AN ACT OF CHEATING

College Name: $\qquad$

Student Name: $\qquad$ Father's Name: $\qquad$

Copy No: $\qquad$

# KARACHI UNIVERSITY BUSINESS SCHOOL UNIVERSITY OF KARACHI <br> FINAL EXAMINATION AFFILIATED COLLEGES; JUNE 2016 STATISTICAL INFERENCE; BA (H)-432 (PART B) <br> BBA - IV 

Date: June 11, 2016
Max Time: 90 Mins Max Marks: $\mathbf{3 0}$

## INSTRUCTIONS:

1. Attempt all questions. Do not write anything on the question paper. TABLES ARE NOT REQUIRED.
2. Mobile phones or any other communicating device will not be allowed in the examination room. Students will have to remove the batteries of these devices before entering the examination hall.

Q1 a) Draw all samples of size three without replacement from the population 2, 3, 4, 4, 5, 6
b) In a random sample of 400 industrial accidents it was found that 231 were due at least partially to unsafe working conditions.
i) Construct a $99 \%$ confidence interval for true proportions [Table value, $\mathbf{\pm 2 . 5 7 ]}$
ii) By using the result of part (i), Can we say that $50 \%$ of the accidents are due to unsafe working condition? Justify your answer. (Calculation not required)

Q2 a) The following data represents the test score obtained by two group of people
Group I $n=12 \quad$ mean $=76 \quad$ Standard deviation $=2.8$
Group II $n=10 \quad$ mean=81 Standard deviation = 3.2
Construct $95 \%$ Confidence interval for difference of means [Table value (1.725)]
By using the result of part (i), Comment on the significance at 5\%
b) Discuss the techniques of reducing Type I error and Type II error.

Q3 a) Following are the measurements of the air velocity and evaporation rate of burning fuel droplets is an impulse engine.

| Air velocity $\mathrm{cm} / \mathrm{s}$ | X | 20 | 60 | 100 | 140 | 180 | 220 | 260 | 300 | 340 | 380 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Evaporation rate $\mathrm{mm}^{2} / \mathrm{s}$ | Y | 0.18 | 0.37 | 0.35 | 0.78 | 0.56 | 0.75 | 1.18 | 1.36 | 1.17 | 1.65 |

$N=10 \quad \Sigma X=2000 \quad \Sigma Y=8.38 \quad \Sigma X Y=2175.40 \quad \Sigma Y^{2}=91097 \quad \Sigma=X^{2}=532000$
By using the results. Calculate the Regression line $Y$ on $X$.
Interpret the value of $a$ and $b$
b) A coin is tossed 200 times; the result is 110 heads and 90 tails. Test the hypothesis that the coin is balanced.at $5 \%$ level of Significance. [Chi square Table Value=3.481]
